## Summary

Familiar with basic sys, net & web sec with a hue of ux & ui and a pint of crms, however currently looking forward to completion of my bachelors in Computer Science.

Touched marketing, support and content editing earlier on and now I'm open for demo-work, freelance, internship & similar opportunities.

Especially if its focused around areas of my interest, or the well-being of others.  
or video games and food.. why not.

I completed O/Alevels at Beaconhouse & Roots. Cried hello world about 21yrs ago & ever since loved everything related to tech, especially dev, Cyber Security, IoT, Ai, & graphics. I'm also fond of blockchain, trading, and.. apparently Art as well?

Currently I'm pursuing my Bachelors in CS, so don't get a lot of work besides curriculum therefore I'm almost always available for a cup of coffee, & work opportunities, except the weekends im working on a project.

Got some expertise in vb, python, js, html, php, c++, server management & network security. Area of interest is Digital forensics, but area of basic expertise is in data recovery, graphics, development, editing, writing, marketing, security penetration testing, server software & hardware maintenance & other tech related stuff which you may see in further detail in the skill's section.

Currently I'm trying to practice with python for OSCP & CCNA and at the same time trying to be financially independent.

In the line of my work; I aim to employ simple yet effective methods of design & compliant strategies by working for a professional entity or a worthwhile purpose; with utmost zeal and zest of my soul and abilities. I try to improvise without loosing versatility; making the best of what's available for everyone to benefit, by learning, teaching and ethically using available resources in an extensive yet sustainable manner.

Since we're all here for Computer Security and.. like all fields of professionalism; I believe what matters is our intentions. Being an Ethical Hacker; just allows me to have a closer look at how Computers Work & How We Can Work together to make businesses systematically deploy computers & tech in a safe and efficient manner.

## Experience

### Junior Web Developer

Unique Links - Web hosting in Pakistan

Dec 2017 - Aug 2020 (2 years 9 months)

Technical

- >. Wordpress Installations,
- >. SSL Integration, (LetsEncrypt)
- >. SMS System Integration via (Cpanel)
